

# Setting up a swimming pool cleaning schedule

Document number: PO-089-EN Version: 1.0 Date of publication: April 14, 2022

## Introduction

The following example shows a method of setting up an automated pool cleaning schedule to activate the cleaning every Sunday at 9:00 am. In order to achieve that, you will need 2 modules:

- M-RT-s (or M-SERV-s with an RTC clock option)
- an output control module (e.g. M-SERV-s)

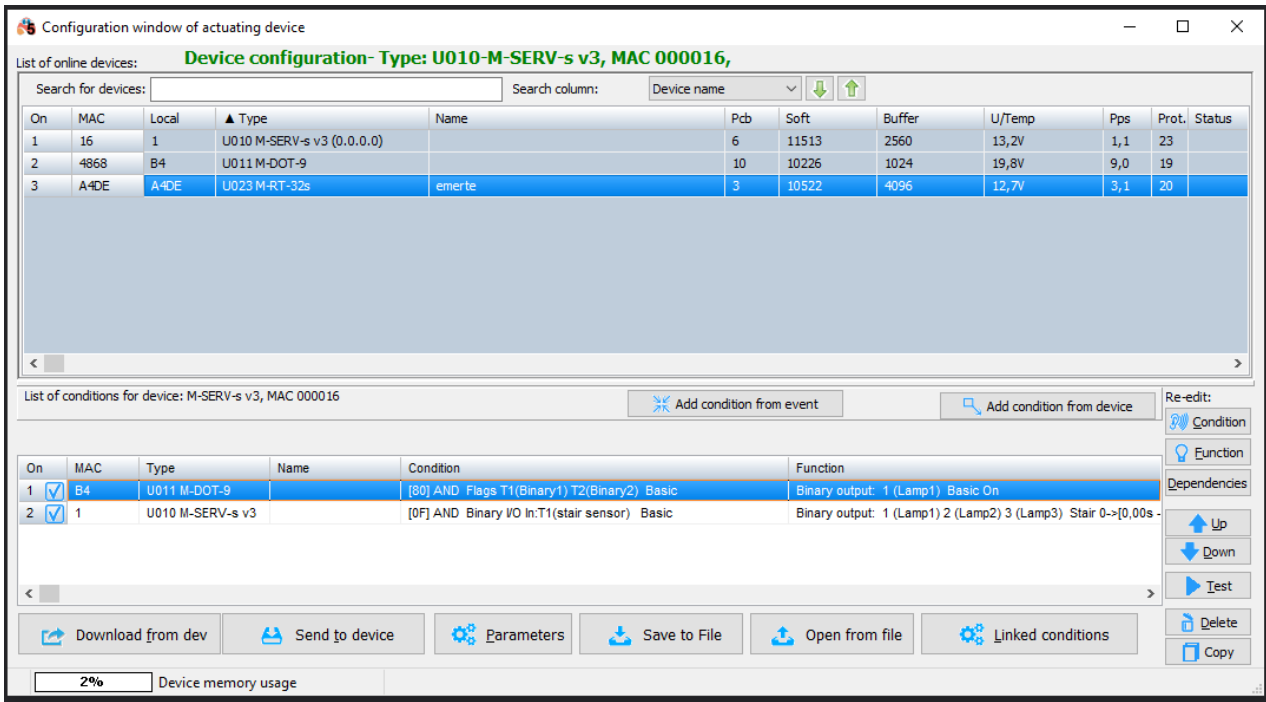

## Configuration

In the Ampio Smart Home configurator, select the M-SERV-s from the list and open its *Device configurator*.

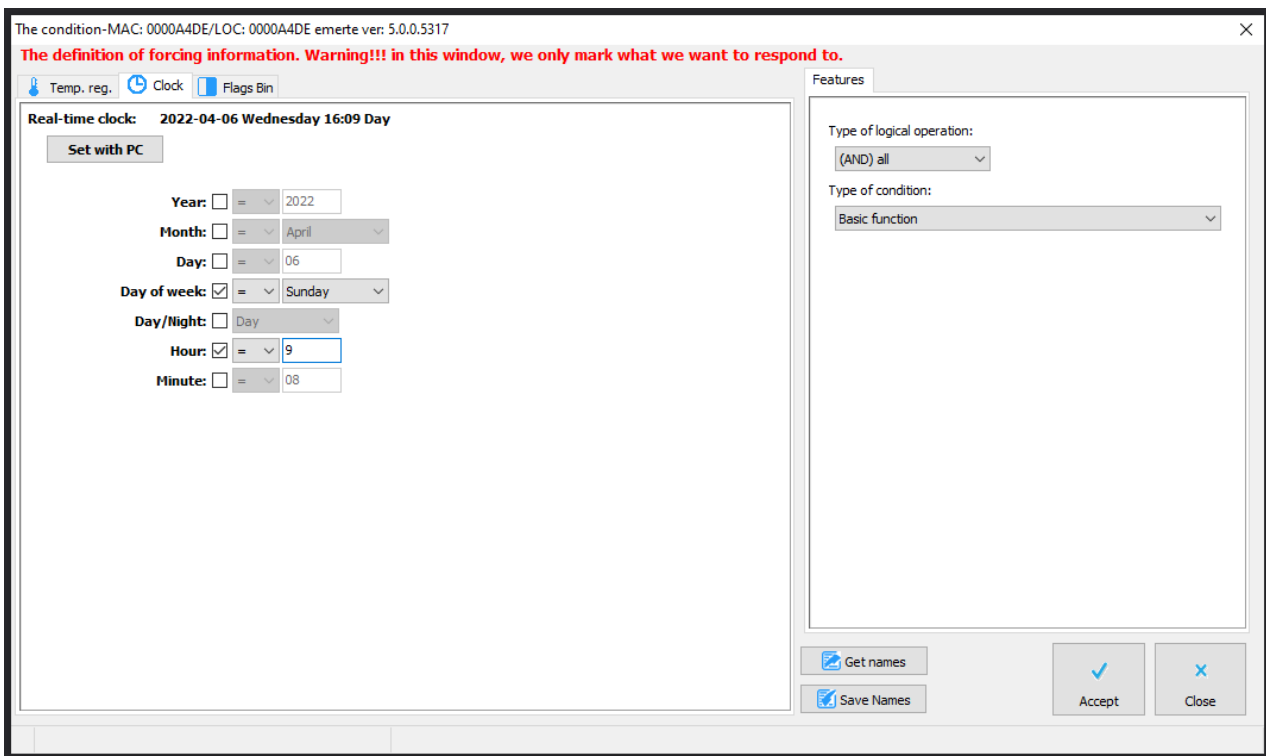

On	MAC	Local	Type	Name	Pcb	Soft
1	16	1	U010 M-SERV-s v3 (0.0.0.0)		6	11513
2	4868	B4	U011 M-DOT-9		10	10226
3	A4DE	A4DE	U023 M-RT-32s	emerte	3	10522

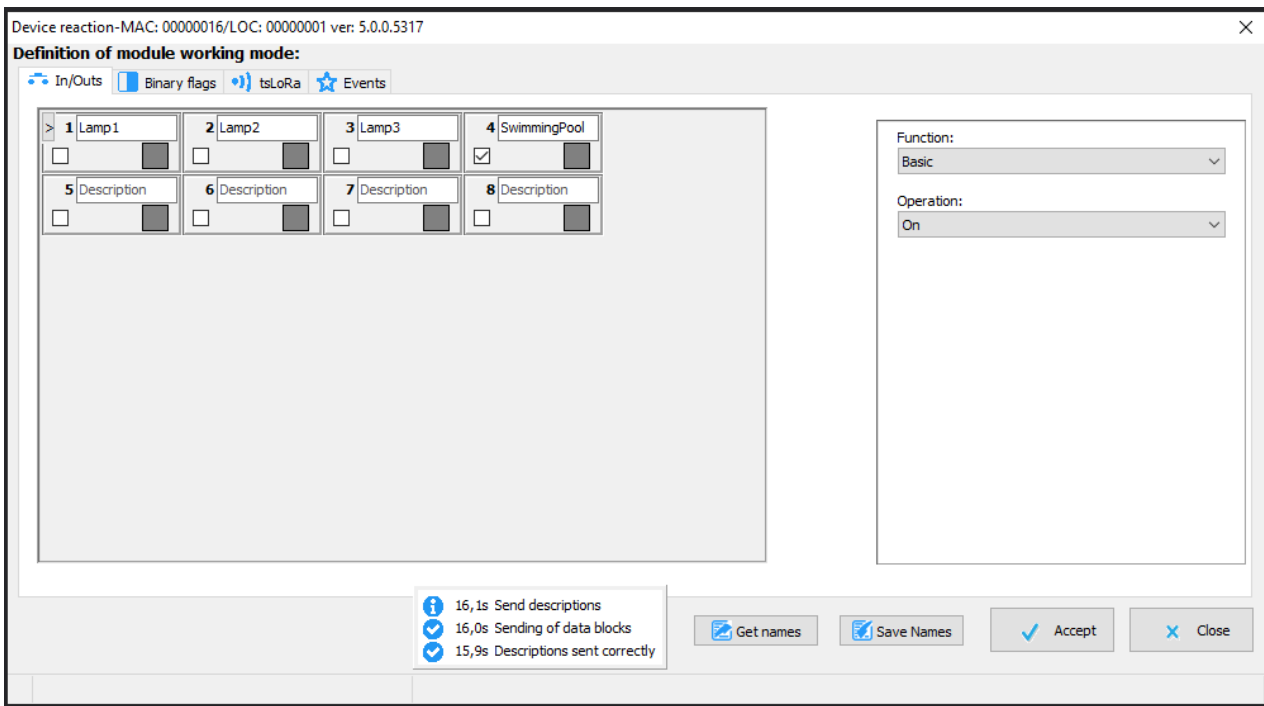

From the modules list, select *M-RT-s* and create a new condition from device.

Then, go to the *Clock* tab. Set the *Day of week* to *Sunday*, and *Hour* to 9. Confirm.

Select the output to which the pool cleaner pump is connected. Pick the *Basic Function* and Operation *On*. Confirm.

At the end of setting conditions, send them to the device. From now on, the swimming pool will be automatically cleaned at 9 o'clock on Sundays.
